Among systems with nursing homes, 71% included

1 or 2

nursing homes.

The largest 5% of systems included on average

9 nursing homes.

This analysis is based on AHRQ's Compendium of U.S. Health Systems, 2018. Developed as part of the Comparative Health System Performance (CHSP) Initiative, the Compendium is a resource for data and research on health systems. For the purposes of the Compendium , health systems include at least one hospital and at least one group of physicians that provide comprehensive care (including primary and specialty care) and are connected with each other through common ownership or joint management. The largest systems in the infographic are those with the largest total number of beds across the system. The CHSP Initiative includes a robust set of research activities that draw on several other de nitions of health systems. For more information about these de nitions, visit : https://www.ahrq.gov/chsp/chsp-reports/resources-for-understanding-health-systems/de ning-health-systems.html.
